                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Apternate kinase (EC 2.7.2.4) alpha chain - Mycobacterium smegmatis

NyAlternate names: aspartokinase alpha chain
C;Species: Mycobacterium smegmatis
C;Date: 07-May-1998 #sequence_revision 15-May-1998 #text_change 18-Jun-1999
C;Accession: $42422; $31801
R;Cirillo, J., D.; Waisbrod, T. R.; Pascopella, L.; Bloom, B.R.; Jacobs Jr., W.R.
Mol. Microbiol. 11, 629-639, 1994
A;Title: Isolation and characterization of the aspartokinase and aspartate semialdehyde
A;Reference number: $42421; MUID:94254720; PMID:7910936
A;Reference number: $42421; MUID:94254720; PMID:7910936
A;Reference: EMBL:217372; MID:944506; PIDN:CAA78984.1; PID:9581352
A;Note: the authors translated the initiation codon GTG for residue 1 as Val
C;Genetics:
A;Start codon: GTG
C;Superfamily: aspartate kinase; aspartate kinase homology
C;Keywords: alternative initiators; phosphorransferase
F;1-421/Product: aspartate kinase alpha chain #status predicted <ASA>
F;3-406/Domain: aspartate kinase beta chain #status predicted <ASA>
F;250-421/Product: aspartate kinase beta chain #status predicted <ASB>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      IKDVPMEDPILTGVAHDRSEAKVTIVGLPDIPGXAAKVFRAVARRRRQHRHGAAE---- 1043

Total number of hits satisfying chosen parameters:

127863 seqs, 47026705 residues

Searched:

seq length: 0 seq length: 200000000 Minimum DB Maximum DB

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

SwissProt_41:* Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-!- SUBUNIT: Monomer (By similarity).
-!- SUBCINIT: MORGET (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: Belongs to the malate synthase family. GlcB subfamily.
